

# SMART SPOT

## Overview

We design innovative cities deploying Smart Points of Interaction (**Smart POIs**), created by IoT devices. called Smart Spots. This solution establishes a **multi directional communication channel** among citizens, visitors and city managers, disseminating open tools for citizen engagement, co-creation, culture sharing and tourism. Additionally, the Smart POIs allow to **know and visualize metrics of a city** as air quality and people crowds through a dashboard tool (<https://live.hopu.eu/>), what streamlines the **government decision making**.

Our solutions meet the requirements of the **Open Agile Smart City (OASC)**, use **OMA LWM2M** communication protocols, and allow the integration with **oneM2M** platform and **FIWARE** enablers.
