This Letter confirms the intention expressed by the Municipality of Cartagena (Murcia-Spain) to be an early adopter and pilot in the CO2 Marketplace project.

The project aims at creating a CO2 Marketplace that goes beyond a simple CO2 trading system at a local scale. The solution aims at motivating the collaboration among industries, rural areas, entrepreneurs, associations and private investors, bringing them together to develop a resilient and sustainable city, rewarding CO2 net-negative products and supporting the creation of a new CO2 neutral-negative economy in a collaborative manner.

In the case of Cartagena, the project will demonstrate the capacities to enable Green Procurements as defined by Spanish MITECO and adopted regulations by Cartagena City Council. Therefore, I would like to express our interest in supporting the CO2 Marketplace 2021 Activity. We would like to collaborate in the validation of the project, deploying it and even acquire it with a contract as an early adopter, since it is in the category of required services by our city.

It is remarkable that Cartagena City is interested in the different opportunities for extending the current actions with this innovative technologies to address emerging EU Green Deal.

Yours faithfully,

Pedro Yepes
